PREBILAC® 2’-FL
Powder Stick for Children

Provides immune support so they can focus on learning in school
PREBILAC® 2’-FL Powder Stick for Children
Provides immune support so they can focus on learning in school

Concept Facts
A healthy gut is our first line of defense: 70% of our immune cells are found in the gut and a healthy gut is a crucial prerequisite to make our immune system work properly.

What is the market need?
- Young children are often picky eaters missing out on key nutrients important to build their immune system.
- Their exposure to external environmental factors are further increased when they start to attend pre-school.
- A good immune system is particularly what every mum wishes for her child during this challenging period.

How can PREBILAC® 2’-FL Powder Stick for Children help?
- As 70% of immune system is located in the gut, building it up early is key for normal immune functions in later life.
- 2’-FL acts as a food to stimulate good bacteria in gut, increasing production of short-chain fatty acids - thus helping gut and immune system to mature.
- Powder stick format is convenient to be incorporated into child’s daily meals such as cereals, yogurt, milk, juice etc.
- PREBILAC® 2’-FL Powder Stick for Children provides them immune support so they can focus on learning in school.
